

**COLORED STONE REPORT** **ELECTRONIC COPY**

June 12, 2024  
 IGI Report Number 625493867  
 Species NATURAL PERIDOT  
 Shape and Cutting Style CUSHION MIXED CUT  
 Weight 12.65 CARATS  
 Measurements 14.45 x 12.93 x 8.88 mm  
 Color and Transparency YELLOWISH GREEN,  
 TRANSPARENT  
 Characteristics NATURAL INCLUSION(S)  
 PATTERN

OPTICAL and PHYSICAL PROPERTIES

Refractive Index	1.654 - 1.690
Birefringence	0.036
Optic Character	BIAXIAL
Optic Sign	+
Specific Gravity	3.34

*Optical and physical properties are approximate values*

**Species & Variety**

Gems may be classified in different species, according to their basic chemical composition and crystal structure; within a certain species, small differences in composition may result in different colors, or varieties.

The way that light interacts with the gem may create some astonishing optical phenomena, such as a star, a cat's eye effect or change of color, in different varieties

**Transparency**

As light passes through a gemstone, part of it, if not all, will be absorbed, and part will be transmitted. The more light that is absorbed the less transparent the stone will be.

**Characteristics**

Internal characteristics are the fingerprints of a gemstone. Not only do they provide essential information about the formation, but also the possible geological and geographical region where they originate from. Sometimes they also provide information about whether the gemstone has been treated.

**Refractive Index**

When light passes through air and enters a gemstone it slows down due to a difference in the medium. The ratio between the speed of light in air and in a particular medium is known the Refractive Index.

**Optic Character**

Determining how light travels through the crystal. Using a range of specialized instruments, we will be able to establish if the stone is isotropic or anisotropic, uniaxial or biaxial.

**Specific Gravity**

Specific gravity is the ratio of the density of the gemstone to the density of an equal volume of water.

All IGI Laboratories employ a wide range of state-of-the-art equipment, like FTIR and Raman spectrometers, all of which give a unique spectral graph for different gemstones. They can reveal the species of the gemstone, treatments and, at times, even the geographic origin.
