**COLORED STONE REPORT**

May 1, 2025  
IGI Report Number 698550370  
Species NATURAL CORUNDUM  
Variety COLOR CHANGE SAPPHIRE  
Shape and Cutting Style OVAL MIXED CUT  
Weight 1.81 CARATS  
Measurements 7.79 x 6.34 x 4.17 mm  
Color and Transparency GREYISH GREEN / PURPLE, TRANSPARENT  
Characteristics NATURAL INCLUSION(S) PATTERN. NO INDICATIONS OF TREATMENT HAVE BEEN FOUND

Comments:  
Color change effect  
Daylight: Greyish Green  
Artificial Light: Purple

Photography is approximate

**OPTICAL and PHYSICAL PROPERTIES**

Refractive Index	1.762 - 1.770
Birefringence	0.008
Optic Character	UNIAXIAL
Optic Sign	-
Specific Gravity	4.00

*Optical and physical properties are approximate values*

**Species & Variety**

Gems may be classified in different species, according to their basic chemical composition and crystal structure; within a certain species, small differences in composition may result in different colors, or varieties.

The way that light interacts with the gem may create some astonishing optical phenomena, such as a star, a cat's eye effect or change of color, in different varieties.

**Transparency**

As light passes through a gemstone, part of it, if not all, will be absorbed, and part will be transmitted. The more light that is absorbed the less transparent the stone will be.

**Characteristics**

Internal characteristics are the inclusions of a gemstone. Not only do they provide essential information about the formation but also the conditions in which the gemstone is grown.

**Refractive Index**

When light passes through air and enters a gemstone it slows down due to a difference in the medium. The ratio between the speed of light in air and in a particular medium is known as the Refractive Index.

**Optic Character**

Determining how light travels through the crystal. Using a range of specialized instruments, we will be able to establish if the stone is isotropic or anisotropic, uniaxial or biaxial.

**Specific Gravity**

Specific gravity is the ratio of the density of the gemstone to the density of an equal volume of water.

All IGI Laboratories employ a wide range of state-of-the-art equipment, which provides comprehensive and accurate assessment of different gemstones.
